Supplemental Intelligence Statement

Item 1520

The primary producers of microwave radio relay equipment in the Soviet Bloc are the USSR, Hungary, and East Germany, all of which produce 2,000 and 4,000 megacycle (mc) systems. As stated in an earlier Supplemental Intelligence Statement prepared by this Office, the USSR and Hungary have completed the design of a 6,000 mc system. Prototype production of this new system in Hungary is scheduled for 1968 with series production planned for 1969. There is no evidence that Communist China has any capability to produce microwave radio relay equipment. The only microwave systems currently in operation in Communist China are 2,000 mc systems imported from East Germany and Hungary during the late 1950's.
